

Chrysanly John C. Roma

Senior Full-Stack Developer

PERSONAL DETAILS

Phone number: +971 52 925 8013
Email: chrys.romao21@gmail.com
Date of Birth: June 24, 1997
Civil Status: Single
Language: Filipino & English
Portfolio: https://chrysanly.github.io/portfolio_v2/

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 5+ years of experience building scalable web applications, RESTful APIs, and enterprise ERP systems using Laravel, Node.js, and modern JavaScript frameworks. Proven expertise in role-based access control, service-repository architecture, database optimization, and real-time system integration. Skilled in leading development teams, mentoring engineers, and applying AI-assisted workflows to accelerate delivery and improve code quality.

TECHNICAL SKILLS

Languages & Frameworks: PHP, JavaScript, Dart, SQL, HTML, CSS/SCSS, Laravel 7-12, Node.js, Vue 3, React, Angular 7-10, .NET Web API, Flutter, Ionic 5

Databases: MySQL, MariaDB, PostgreSQL, MongoDB, Firebase Firestore

Architecture & Practices: SOLID Principles, Repository Pattern, Service Layer Pattern, RESTful API Design, Role-Based Access Control (RBAC), TDD, Clean Code, Conventional Commits, Agile/Scrum

Authentication & Security: Laravel Sanctum, Laravel Passport OAuth, Twilio OTP, JWT

Tools & Platforms: Git, GitHub, GitLab, Azure, AWS, Firebase, Docker, Postman, JIRA, Figma, Composer, NPM, Vite, Webpack

Testing: PHPUnit, Pest, Firebase Emulator

AI-Assisted Development: AI-driven code integration, optimization, and workflow automation

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer - Almutakamela Vehicle Testing and Registration - Dubai, UAE

Nov 2025 - Present

- Led development of a modular ERP system in Laravel spanning four core modules: Dashboard, Finance, Mobile CIS, and API App.
- Implemented role-based middleware for authentication and permission management, securing access across all modules by user role.
- Built the Finance module with role-permissioned accounting pages, financial aging logic for debit and credit balances, and asset depreciation tracking.
- Developed the Mobile CIS module to manage client service appointments based on customer information.
- Delivered the Dashboard module to configure mobile API data categories and service listings.
- Built secure REST APIs with Laravel Sanctum to power mobile app authentication and integration.
- Refactored core business logic using Repository and Service Layer patterns, improving code reusability, Eloquent query performance, and maintainability.
- Reviewed developer code and mentored team members to uphold clean architecture and coding standards.
- Applied AI-assisted tools to streamline integration tasks, optimize performance, and automate repetitive workflows.

Senior PHP Developer - OmniQuest PH (Unilab) - Philippines

Mar 2025 - Aug 2025

- Managed a single project comprising four interconnected systems integrated with a central CRM, ensuring seamless data flow and functionality across all platforms.
- Developed a dynamic CRM registration module reusable across multiple events, improving flexibility and reducing setup time for new campaigns.

- Authored technical documentation to establish a structured local-to-beta-to-live deployment workflow, improving release stability and reducing risk to production.
- Updated database stored procedures and functions to align with evolving client requirements, improving data accuracy and system performance.

Web Developer - ThinkBit Solutions Phils. Inc - Philippines

Nov 2022 - Feb 2025

- Led full-stack Laravel development for multiple high-performance web applications with real-time features, API integrations, and secure authentication.
- Managed Agile processes including sprint planning, backlog grooming, and stand-ups while mentoring junior developers.
- Developed real-time backend systems using Pusher, Firebase, and Twilio APIs; integrated Google Maps, Monday.com, and AWS S3.
- Refactored legacy Laravel 5 systems to current versions, optimizing APIs and database performance.
- Built secure authentication solutions including Twilio OTP and Laravel Passport OAuth.
- Developed a proof-of-concept facial recognition login system with activity logging and API integration.

Mid Software Developer – TurismoPH - Philippines

Jan 2021 - Oct 2022

- Built a JWT-secured booking system with real-time availability, RESTful APIs, and React front-end enhancements.
- Developed a vendor management system, migrating a Laravel CMS to Node.js with subscription features and Angular dashboards documented via Swagger.
- Created a membership system for government website with bulk CSV uploads and dynamic region and category reporting.
- Applied Agile methodologies for sprint planning, backlog management, and iterative delivery.

Junior Web Developer - V. Zuniga Logistics - Philippines

Nov 2018 - Dec 2020

- Developed and maintained internal web applications using PHP and ASP.NET, implementing business requirements and resolving application issues.
- Assisted in the migration, enhancement, and maintenance of the ZAP Inventory Management System, contributing to feature development and workflow improvements.
- Designed and maintained database queries, generated operational reports, and supported inventory management processes.
- Collaborated with senior developers and business users to troubleshoot, test, and deploy application updates.
- Performed basic system administration and provided technical support for hardware, software, and network-related issues when required.

EDUCATION

Bachelor of Science in Information Technology

Our Lady of Lourdes College, Valenzuela City | 2020
